Attract (pull together) Repel (push away)
Pull it in or push it away
That's what a magnet does, I say
Magnets pull it in if it's different;
Opposites do attract
It it's the same, they repel;
That's an interesting fact Magnets are made of nickel, iron or steel

Seeking North & South poles like a compass wheel
The Earth is a big magnet, you know.
Some other planets are too
The Earth has a North & South pole
Attracting magnetic forces, that's true
A magnet left to freely turn
Will point N & S we learn.
