

# Fossil Fuels

©2011 Rocky Mountain Music

[Chorus]

Fossil 1, fossil 2, fossil 3, fossil fuel  
Every time we burn it  
We add to the blanket  
Carbon's the invisible thread  
If we burn a fossil fuel  
We will add to the blanket  
So what can we do then instead?

[V1]

Fossil 1, we've just begun  
It's a little black rock full of ancient sun  
We call it coal, and it's very old  
Made of prehistoric plants  
Or so I'm told

When we burn coal at a power plant  
Our electricity's created there  
But when we burn coal at a power plant  
The invisible blanket gets another layer (x2)

[V2]

Fossil 2, now we're halfway through  
It's a thick and a slick  
Ooey gooey black stew  
We call it oil, it comes out of the soil  
And to its power we are oh so loyal

When I burn oil in my little car  
The power for my motor is created there  
But when I burn oil in my little car  
The invisible blanket gets another layer (x2)

[Bridge]

A fossil fuel is older than you  
It's older than everyone  
It's even older than the Rockies  
And the dinosaurs  
And full of prehistoric sun (x3)  
"Prehistoric sun, which makes up fossil fuels  
Is full of carbon dioxide  
And that, my friends, is a big part of the  
invisible blanket"

[V3]

Fossil 3, we can all agree  
Is called natural gas  
Most definitely  
It's bought and sold  
Like invisible gold  
And it heats my home when the weather gets  
cold

When my furnace is ablaze with natural gas  
The heat for my home is created there  
But when my furnace is ablaze with natural gas  
The invisible blanket gets another layer (x2)

[Chorus]

Fossil 1, fossil 2, fossil 3, fossil fuel  
Every time we burn it  
We add to the blanket  
Carbon's the invisible thread  
If we burn a fossil fuel  
We will add to the blanket  
So what can we do then instead?  
Ooohhh...
