Mission to Europa

© Jim Thorne, 2016 (key of G)

G C G C D
Laura went to Jupiter and Tommy went along with her
C D
They found it soon, an icy moon
G C G C
At Europa, there would be below the ice a deep, dark sea
C D
Where ships could dive, and might survive

Chorus:
G D G
Way down low below the ice of Europa
G D
Kids could find brand new life hopefully
G D G
When they go below the ice of Europa
G C D G
Things could be swimming free in that sea

In Europa they would look
Down through the water when they took
Their ships below the ice and snow
Deep inside the icy moon
They had to look through dark and gloom
To see if signs were left behind

Chorus

Bridge:

Bm
Jupiter has many moons
Am
That range from big to small
C
One is called Europa
D
It's the smoothest icy ball

Laura sent a robot out
To swim the sea and try to scout
For tracks and marks, or maybe sharks!
Tommy gave the robot fuel
To run for years and use its tools
To search alone and phone back home

Chorus

Bridge

After many years went by
The robot did its best to try
To find some clues and send the news
Someday we may know the truth
With extra-ordinary proof
That life could be down in that sea

Chorus
