

The History of Space

© Jim Thorne, 2017 (key of C)

C G
Tommy & Laura had a brand new job to do

F G C
To learn about the history of space

C G
Could they go back to see the early milestones

F G C
Of exploration by the human race?

Spinning around the sun, they took a curving path
That pulled them ever backward into time
After they found themselves in 1961
They saw the early spaceships start to fly C – G

Chorus:

C G C
Going to see the past, they built a ship to fly through time
F C D G
Looking for things to get on camera – *moments that will shine*

C G C
Doing it for the Mars Museum took them all around
F C G C – G
When they got back, they brought the pictures of the things they found

Yuri Gagarin was the first to orbit Earth
Then Alan Shepard rose into the blue
Mercury capsules flew with people like John Glenn
And Gemini taught them how to rendezvous

People around the world were racing for the moon
But NASA led the way in '69
After Armstrong and Aldrin were the first to land
Apollo came in peace for all mankind C – G

Chorus – Bridge:

If their ship got near the show, they could be a UFO!

Laura saved all the images of ships and crews
That she and Tommy gathered from the past
Bringing them back to Mars for people there to see
The history of space, from first to last

After the Mars Museum had an open house
The history display was well received
Sharing the truth of how it all began in space
By showing the good work that the kids achi eved C – G

Chorus
